Continuation of 3. NOTE: The amendments to independent claim 18 (which incorporate the subject matter of cancelled claims 29 and 31) raise new considerations and elemental/operational features/functions by changing the scope of the claims. Therefore, the amendments would require additional consideration.

Continuation of 11, does NOT place the application in condition for allowance because: Applicant's arguments are not persuasive. The amendments made to claim 18 (and argued by the Applicant) incorporate the subject matter of claims 29 and 31 which require the diaphragm to have narrow elongate openings having a T-shape configuration with a specific orientation. As previously applied to claim 18, Nuesch in combination with Litt teach narrow elongate openings in a diaphragm (the openings being specifically taught by Litt), but do not teach that these openings have the claimed T-shape configuration. Paradis, however, was previously applied to reject claims 29 and 31 and is still applicable to the rejection of newly amended claim 18. Paradis teaches T-shaped openings in a valve disk that have the claimed T-shape configuration (see Fig 7B of Paradis as well as the Final Rejection of claims 29 and 31). Applicant argues that these T-shaped openings are formed in a plate and not in a diaphragm; however, this is not persuasive since Nuesch and Litt teach a diaphragm having elongated openings and it would be obvious to one of ordinary skill to modify the elongated openings of Litt to be of a T-shaped configuration as taught by Paradis for the purpose of controlling the flow of fluid through the disk when under pressure (Col 6, Lines 12-14 of Paradis).
